Tab stops

A tab in the text moves on to the next tab stop. The stops come from the CSS property `-bag-tab-stops`, so the Markdown stays plain text: no tables, no HTML, just tabs between the columns.

Each tab is written as the entity `	`, so it shows in the source. Spaces next to it are dropped, they only make the source easier to read. A literal tab character works the same, but cannot be told apart from a space in the editor.

A contents list

Each line has two tabs: one before the title, one before the page number. The second stop sits at 100% of the line width and aligns the number at its end, with a dotted leader across the gap.

1 Introduction 3
2 Setting type 7
2.1 Tab stops 12
2.2 Leaders across the gap 15
3 Index 121

Labels and values

A single start stop at 35 mm lines up the values, however long the labels are.

Name	Alice Example
Address	Bob Street 12, 12345 Sample City
E-mail	alice@example.com

Prices on the decimal comma

Decimal stops line the figures up on their separator, here a comma. A figure without one, like the column heading, ends at the stop.

Item	Price per kg	In stock
Apples	3,50	1.234,5
Pears	12,75	87
Plums	0,9	12.400

Centered under a line

Two center stops at a quarter and three quarters of the line. The line starts with a tab, so the first caption is centered on a stop as well.
