Figure 1 — caption block of the top-float.

A second block inside the same float, demonstrating that fo:float can carry the full XSL-FO `(%block;)+` content model — not just a single paragraph.

Top-float demo

First body paragraph. The float above is anchored to this page; its content is lifted out of the flow and stacked at the top of the content area.

Second body paragraph, no float, flows under the top stack.

Third body paragraph, also without a marker. Lorem ipsum dolor sit amet, consectetur adipiscing elit.
