Accessibility Showcase

What this document demonstrates

This PDF is generated with PDF/UA tagging enabled. Every paragraph, heading, and figure carries a structure element so screen readers can navigate the content the way the author intended. The catalog declares its language as *en-US*, and the document title appears in the PDF window chrome instead of the filename.

Figure with alternative text

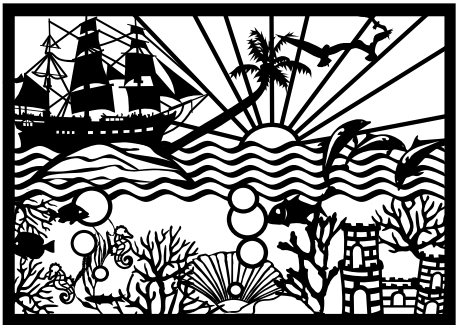

Figure 1 — the alt-text on the fo:external-graphic flows into the PDF Figure element's /Alt entry.

Reading order

Body content is emitted into the structure tree in source order, which is also the logical reading order for a PDF/UA validator. No content is silent or untagged: even purely decorative material is wrapped as an Artifact at shipout time so it does not pollute the reading order.

Verifying the output

Run `pdfinfo 10-pdfua.pdf` to see the Title, Tagged flag, and Lang fields. For a full spec validation use `veraPDF` with the PDF/UA-1 profile.
